

# Environmental Policy

## Our Environmental Guidelines

FOERSTER is an international market leader for non-destructive testing of semi-finished products and components as well as for metal detection in the field of contaminated sites and ordnance exploration.

Responsible environmental protection is an essential requirement for the continuous success of a company. Therefore, environmental protection is an integral part of the long-term strategy of FOERSTER.

Environmentally friendly product design takes into account the environmental impact of the complete product lifecycle, starting from development to manufacturing, customer service, disposal and recycling. All corporate functions are involved in this process.

Another aim of our product development is to help our customers improve the quality of life and the environment in their area, e.g. by replacing old, environmentally harmful installations with modern, environmentally friendly test systems.

Specifically, this means in detail:

- Compliance with legal guidelines and regulations
- Development of environmentally friendly products
- Environmentally compatible production processes
- Environmentally friendly service concepts
- Consideration of the later disposal of our products
- Careful use of natural resources
- Efficient use of energy
- Prevention of waste
- Recycling measures
- Continuous improvement of operational environmental protection

An environmental manager for implementation and compliance with environmental protection measures has been appointed. These guidelines are binding for all employees of Institut Dr. Foerster GmbH & Co. KG.
